

CORTEX SHIELD vs. Vantage Point Security

Mid-Market (200–2,000 employees) | Buyer: IT Director / CISO, lean security team | Sales cycle: 45–60 days

	CORTEX SHIELD	VANTAGE POINT SECURITY
Response commitment	15-min average SLA	Publishes a detect/respond goal, not a contractual SLA
Coverage model	Dedicated named analyst	Managed SOC (rotating)
Typical price point	~30% lower	Premium / broader platform

POSITIONING: Don't fight over who has the longer feature list. Make it a conversation about who is accountable when the environment is under threat — that's where a dedicated analyst, a 15-min SLA, and 30% lower cost win.

WHY WE WIN ▶ Accountability — one named analyst who knows your environment, not a rotating queue. ▶ Speed — 15-min average response SLA. Detection only matters if someone acts. ▶ Fit — ~30% lower cost; you pay for what mid-market teams actually deploy. "THE BIGGER VENDOR IS THE SAFE CHOICE" ▶ Acknowledge: "Fair — they're a credible market leader." ▶ Reframe: "Vendor size and operational fit aren't the same thing." ▶ Challenge: "If both detect threats, compare the operating model and accountability, not the logo." ▶ Advance: "Want to map exactly who owns each step from alert to remediation?"	LANDMINE QUESTIONS (PICK 1–2) ▶ "When a high-severity incident hits, do you want a broad org — or one person who already knows your environment?" ▶ "Which features will actually change your outcome in 12 months, vs. just pad the checklist?" DO NOT COMPETE HERE ▶ Don't say: "We have the same features they do." ▶ Do say: "Which capabilities will you actually use — and what outcome does that extra spend buy?" SALES TAKEAWAY Don't prove the competitor is bad. Make them prove scale beats accountability, speed, and 30% lower cost for their team.
